BioSystems, 27 (1992) 243–245
(1992) Elsevier Scientific Publishers Ireland Ltd.

Subject Index

Volume 27

Afterhyperpolarization, neuronal model, membrane potential, spiking activity, refractory period, Stochastic process, 25
Amino acid residues, chirality of biomolecules, proton transfer, hydrogen bonded chain, 129
Antibody, lattice representations, relational processes, antigen, 115
Antigen, lattice representations, relational processes, antibody, 115
Archaebacteria, evolution, Mychota, Protoctista, symbiogenesis, systematics, 39
Artificial intelligence, high-order RNA structures, maximum independent set, biological regulation, neural nets, planarization algorithms, 85

Bacteriorhodopsin, *Halobacterion halobium*, Langmuir-Blodgett film, purple membranes, scanning tunneling microscopy, 195
Bacteriorhodopsin, molecular computing, Lyapunov convergence, non-uniform sampling, BR, spatial light modulator, 179
Bacteriorhodopsin, ultrafast charge separation, optoelectric signal transducer, 201
Bimolecular computing, non-discrete biomolecular information processing device, problems of high computational complexity, 219
Biochemical systems, metabolic control analysis, control coefficients, response coefficients, invariance properties, 1
Biological regulation, high-order RNA structures, artificial intelligence, maximum independent set, neural nets, planarization algorithms, 85
Biomolecular information processing, enzyme catalysis, self-assembly, molecular computing, quantum computing, 223
Biosensors, enzyme immobilized electrodes, sensors, 203
Boolean networks, molecular automata, enzyme simulation, 97
BR, molecular computing, Lyapunov convergence, non-uniform sampling, bacteriorhodopsin, spatial light modulator, 179
Brain, lexical ambigity, natural language, semantic decision, 235

Cell cycle dispersion, chaos, limit cycle, quantal cell cycle, ultradian clock, 17
Chaos, cell cycle dispersion, limit cycle, quantal cell cycle, ultradian clock, 17
Chirality of biomolecules, proton transfer, hydrogen bonded chain, amino acid residues, 129
Control coefficients, metabolic control analysis, biochemical systems, response coefficients, invariance properties, 1

Dihydropyridines, photochromism, optical memory, optical switch, 213

Electron shuttles, electron wires, visual transduction, molecular recognition, electrostatic interactions, intelligent materials, molecular switches, shape-based information processing, 189
Electron wires, electron shuttles, visual transduction, molecular recognition, electrostatic interactions, intelligent materials, molecular switches, shape-based information processing, 189
Electrostatic interactions, electron shuttles, electron wires, visual transduction, molecular recognition, intelligent materials, molecular switches, shape-based informaion processing, 189
Enzyme catalysis, self-assembly, molecular computing, quantum computing, biomolecular information processing, 223
Enzyme immobilized electrodes, biosensors, sensors, 203
Enzyme simulation, molecular automata, Boolean networks, 97
Equivalence point, globally asymptotically stable, switching point, interspecific competition, 171
Evolution, Archaebacteria, Mychota, Protoctista, symbiogenesis, systematics, 39
Evolution, genotype, natural selection, phenotype, Uncertainty principle, variations, 63
Extra dimensional bypass, fitness landscapes, speciation, neutralism, punctualism, 125

Fitness landscapes, extra dimensional bypass, speciation, neutralism, punctualism, 125

Genetic code periodicity, thermodynamic activation parameters of amino acid ester aminolysis, 77
Genotype, evolution, natural selection, phenotype, Uncertainty principle, variations, 63
Globally asymptotically stable, equivalence point, switching point, interspecific competition, 171

Halobacterion halobium, bacteriorhodopsin, Langmuir-Blodgett film, purple membranes, scanning tunneling microscopy, 195
High-order RNA structures, artificial intelligence, maximum independent set, biological regulation, neural nets, planarization algorithms, 85
Hydrogen bonded chain, chirality of biomolecules, proton transfer, amino acid residues, 129

Intelligent materials, electron shuttles, electron wires, visual transduction, molecular recognition, electrostatic interactions, molecular switches, shape-based information processing, 189
Interspecific competition, equivalence point, globally asymptotically stable, switching point, 171
Invariance properties, metabolic control analysis, biochemical systems, control coefficients, response coefficients, 1

Langmuir-Blodgett film, bacteriorhodopsin, *Halobacterion halobium*, purple membranes, scanning tunneling microscopy, 195
Lattice representations, relational processes, antigen, antibody, 115
Lexical ambigity, brain, natural language, semantic decision, 235
Limit cycle, cell cycle dispersion, chaos, quantal cell cycle, ultradian clock, 17
Lineage fusion, monophyly, reticulate evolution, symbiosis, phylogenetic trees, 53
Lyapunov convergence, molecular computing, non-uniform sampling, BR, bacteriorhodopsin, spatial light modulator, 179

Maximum independent set, high-order RNA structures, artificial intelligence, biological regulation, neural nets planarization algorithms, 85
Membrane potential, neuronal model, afterhyperpolarization, spiking activity, refractory period, Stochastic process, 25
Metabolic control analysis, biochemical systems, control coefficients, response coefficients, invariance properties, 1
Molecular assembly, molecular electronics, molecular materials, molecular information storage, molecular information transmission, 207
Molecular automata, enzyme simulation, Boolean networks, 97
Molecular computing, enzyme catalysis, self-assembly, quantum computing, biomolecular information processing, 223
Molecular computing, Lyapunov convergence, non-uniform sampling, BR, bacteriorhodopsin, spatial light modulator, 179
Molecular electronics, molecular materials, molecular information storage, molecular information transmission, molecular assembly, 207
Molecular information storage, molecular electronics, molecular materials, molecular information transmission, molecular assembly, 207
Molecular information transmission, molecular electronics, molecular materials, molecular information storage, molecular assembly, 207
Molecular materials, molecular electronics, molecular information storage, molecular information transmission, molecular assembly, 207
Molecular recognition, electron shuttles, electron wires, visual transduction, electrostatic interactions, intelligent materials, molecular switches, shape-based information processing, 189
Molecular switches, electron shuttles, electron wires, visual transduction, molecular recognition, electrostatic interactions, intelligent materials, shape-based information processing, 189
Monophyly, lineage fusion, reticulate evolution, symbiosis, phylogenetic trees, 53
Mychota, Archaebacteria, evolution, Protoctista, symbiogenesis, systematics, 39

Natural language, brain, lexical ambigity, semantic decision, 235
Natural selection, evolution, genotype, phenotype, Uncertainty principle, variations, 63
Neural nets, high-order RNA structures, artificial intelligence, maximum independent set, biological regulation, planarization algorithms, 85
Neural networks, neuron model, refractory period, threshold dynamics, 137
Neuron model, refractory period, threshold dynamics, neural networks, 137
Neuronal model, membrane potential, afterhyperpolarization, spiking activity, refractory period, Stochastic process, 25
Neutralism, fitness landscapes, extra dimensional bypass, speciation, punctualism, 125
Non-discrete biomolecular information processing device, bimolecular computing, problems of high computational complexity, 219
Non-uniform sampling, molecular computing, Lyapunov convergence, BR, bacteriorhodopsin, spatial light modulator, 179

Optical memory, photochromism, dihydropyridines, optical switch, 213
Optical switch, photochromism, dihydropyridines, optical memory, 213
Optoelectric signal transducer, bacteriorhodopsin, ultrafast charge separation, 201
Oscillatory calcium waves, systems analysis, Structured Biological Modelling, Stochastic simulation, signal transduction, 145

Phenotype, evolution, genotype, natural selection, Uncertainty principle, variations, 63

Photochromism, dihydropyridines, optical memory, optical switch, 213
Phylogenetic trees, monophyly, lineage fusion, reticulate evolution, symbiosis, 53
Planarization algorithms, high-order RNA structures, artificial intelligence, maximum independent set, biological regulation, neural nets, 85
Problems of high computational complexity, bimolecular computing, non-discrete biomolecular information processing device, 219
Protoctista, Archaebacteria, evolution, Mychota, symbiogenesis, systematics, 39
Proton transfer, chirality of biomolecules, hydrogen bonded chain, amino acid residues, 129
Punctualism, fitness landscapes, extra dimensional bypass, speciation, neutralism, 125
Purple membranes, bacteriorhodopsin, *Halobacterion halobium*, Langmuir-Blodgett film, scanning tunneling microscopy, 195

Quantal cell cycle, cell cycle dispersion, chaos, limit cycle, ultradian clock, 17
Quantum computing, enzyme catalysis, self-assembly, molecular computing, biomolecular information processing, 223

Refractory period, neuron model, threshold dynamics, neural networks, 137
Refractory period, neuronal model, membrane potential, afterhyperpolarization, spiking activity, Stochastic process, 25
Relational processes, lattice representations, antigen, antibody, 115
Response coefficients, metabolic control analysis, biochemical systems, control coefficients, invariance properties, 1
Reticulate evolution, monophyly, lineage fusion, symbiosis, phylogenetic trees, 53

Scanning tunneling microscopy, bacteriorhodopsin, *Halobacterion halobium*, Langmuir-Blodgett film, purple membranes, 195
Self-assembly, enzyme catalysis, molecular computing, quantum computing, biomolecularinformation processing, 223
Semantic decision, brain, lexical ambigity, natural language, 235
Sensors, biosensors, enzyme immobilized electrodes, 203
Shape-based information processing, electron shuttles, electron wires, visual transduction, molecular recognition, electrostatic interactions, intelligent materials, molecular switches, 189
Signal transduction, systems analysis, Structured Biological Modelling, Stochastic simulation, oscillatory calcium waves, 145
Spatial light modulator, molecular computing, Lyapunov convergence, non-uniform sampling, BR, bacteriorhodopsin, 179
Speciation, fitness landscapes, extra dimensional bypass, neutralism, punctualism, 125
Spiking activity, neuronal model, membrane potential, afterhyperpolarization, refractory period, Stochastic process, 25
Stochastic process, neuronal model, membrane potential, afterhyperpolarization, spiking activity, refractory period, 25
Stochastic simulation, systems analysis, Structured Biological Modelling, oscillatory calcium waves, signal transduction, 145
Structured Biological Modelling, systems analysis, Stochastic simulation, oscillatory calcium waves, signal transduction, 145
Switching point, equivalence point, globally asymptotically stable, interspecific competition, 171
Symbiogenesis, Archaebacteria, evolution, Mychota, Protoctista, systematics, 39
Symbiosis, monophyly, lineage fusion, reticulate evolution, phylogenetic trees, 53
Systematics, Archaebacteria, evolution, Mychota, Protoctista, symbiogenesis, 39
Systems analysis, Structured Biologial Modelling, Stochastic simulation, oscillatory calcium waves, signal transduction, 145

Thermodynamic activation parameters of amino acid ester aminolysis, genetic code periodicity, 77
Threshold dynamics, neuron model, refractory period, neural networks, 137

Ultradian clock, cell cycle dispersion, chaos, limit cycle, quantal cell cycle, 17
Ultrafast charge separation, bacteriorhodopsin, optoelectric signal transducer, 201
Uncertainty principle, evolution, genotype, natural selection, phenotype, variations, 63

Variations, evolution, genotype, natural selection, phenotype, Uncertainty principle, 63
Visual transduction, electron shuttles, electron wires, molecular recognition, electrostatic interactions, intelligent materials, molecular switches, shape-based information processing, 189
